

Smart Safe Efficient

NimBO is an innovative training device that can improve your joint mobility (ROM-range of motion) and muscle strength in a smart, safe, and efficient way.

Muscle Weakness

Degeneration

Post Surgery

Neurological Injuries

Isokinetic Multi-joint Exercise System

Shoulder

Hip

Elbow

Knee

Wrist

Ankle

NimBO is only 2.5 kg and can be applied on upper or lower limbs with different training modes (passive, assistive, active, and resistive). Therapists may apply NimBO on different indications at clinical setting, and it can also be used at home to make rehabilitation more efficient and effective.

Improve Your Quality of Life

HIGH TECH

By giving customized training parameters based on evaluation (angle, speed, resistance, duration, etc.), NimBO progressively improves users' physical condition with real-time visual feedback and graphically training records.

▶▶▶ Easy set up in a minute!

SAFE

NimBO evaluates user's active/passive range of motion and muscle strength before training to ensure exercise is under safety condition.

Isokinetic / Isotonic / Isometric Training modes & Features

Training and evaluation can be further compared and analyzed. The improvement is now traceable!

EFFECTIVE

NimBO's accurate repetition protocol combined with isokinetic, isotonic, and isometric training modes make your daily practice more efficient.
